Abstract of the Disclosure

Harvesting equipment (1) for harvesting corn or other such stalked vegetation, the harvesting equipment comprising at least one circulating endless conveyor (10; 11) for gathered plants, which at an end forms an area (14) for delivery of the plants to an inlet opening of a further processing apparatus, especially a chopper, the endless conveyor comprising conveyor links (25; 26) articulated to one another and at least one cutting plane (A) comprising outwardly pointing cutting means and having above it at least one holding plane (B; C) for holding the cut stalks and comprising lower, outwardly-pointing holding means, is so constructed that a front side (77; 78) of the endless conveyor (10; 11), facing the cutting and holding means, is of a substantially closed configuration (Figure 3).
